

Contents

Chapter 1 Soft Matter Nanotechnologies

1.1	Nanotechnology and Nanomaterials	1
1.2	Nanotechnology Routes from Inorganic to Organic Materials	7
1.2.1	Lithographies	9
1.3	One-dimensional Structures and Nanostructures	13
1.4	Introduction to Polymer Physics and Engineering	15
1.4.1	Glass Transition Phenomenology	17
1.4.2	Rheology and Flow Behavior	26
1.4.2.1	Linear Viscoelastic Response and Material Functions	27
1.4.2.2	Modeling Linear Viscoelasticity. The Maxwell Model	35
1.4.3	Polymer Solutions	39
	References	43

Chapter 2 Electrospinning

2.1	Electrostatic Spinning	50
2.1.1	Droplet Formation	51
2.1.2	Jet Formation	54
2.1.3	Jet Instabilities	57
2.1.4	Solvent Evaporation	62
2.1.5	Molecular Orientation	65
2.2	Process Parameters	68
2.3	Process Engineering	71
2.3.1	Coaxial Architectures	78

2.3.2	Collector Geometries and Alignment of Nanofibers	82
2.3.3	Use of Composite Solutions	90
2.4	Technological Issues and Process Upscaling Towards Industrialization	94
2.4.1	Production Yield and Reproducibility	95
2.5	Process Theory and Modeling	100
2.5.1	Early Models (1970s–1999)	102
2.5.2	Reneker and Yarin Models	103
2.5.3	Electrohydrodynamic Models	107
2.5.4	More Recent Approaches (2002–2011)	113
	References	119

Chapter 3 Other Fabrication Technologies for Polymer Nanofibers

3.1	Self-assembly and Polymerization Methods	132
3.1.1	Self-assembly from Marginal Solvents	133
3.1.2	Casting Methods	137
3.1.3	Other Self-assembly Examples	139
3.1.4	Polymerization Methods	142
3.2	Nanofluidics	144
3.3	Template Synthesis	148
3.3.1	Hard Templates	149
3.3.2	Soft Templates	157
3.4	Interfacial Polymerization	168
3.5	Direct Writing Methods	172
3.6	Phase Separation	174
	References	176

Chapter 4 Structural and Surface Properties of Polymer Nanofibers and Their Applications

4.1	Structural and Mechanical Properties	189
4.1.1	Carbon Nanofibers	195
4.2	Porosity and Wettability Properties	197
4.2.1	Porosity	197
4.2.1.1	Porosity of Nanofibers Assemblies	197
4.2.1.2	Internal Porosity of Single Nanofibers	201
4.2.1.3	Surface Porosity of Single Nanofibers	201
4.2.2	Wettability	202
4.3	Applications	209
4.3.1	Filtration, Catalysis and Energy Storage	209
4.3.2	Micro- and Nanofluidics, Thermal Management and Sensing	218

<i>Contents</i>	xiii
4.3.3 Textiles	224
References	228
Chapter 5 Optical Properties of Polymer Nanofibers and Their Applications	
5.1 Organic Light-emitting Materials	236
5.1.1 Excitations and Electronic Transitions	237
5.1.2 Energy Transfer Mechanisms	241
5.1.3 Stimulated Emission and Lasing from Organics	247
5.2 Light-emitting Nanofibers	249
5.2.1 Molecular Aggregation and Orientation in Light-emitting Polymer Nanofibers	251
5.2.2 Polarization Properties	254
5.2.3 Light-emission Tunability	256
5.2.4 Other Properties of Light in and from Nanofibers	262
5.3 Polymer Nanofiber-based Optoelectronics	266
5.3.1 Organic Light-emitting Devices	266
5.3.2 Photo-detectors and Solar Cells	270
5.4 Waveguiding	274
5.5 Lasing	279
5.6 Nanopatterned Nanofibers	282
References	286
Chapter 6 Electrical Properties and Their Applications	
6.1 Transport Phenomena in Organic Semiconductors	295
6.1.1 Supramolecular Organization and Electrical Conduction in Polymers	297
6.2 Nanofibers by Conductive Polymers	300
6.3 Applications in Nanoelectronics	310
6.3.1 Polymer Nanofiber Field-effect Transistors	318
6.3.1.1 P-type Devices	319
6.3.1.2 N-type Devices	323
6.3.1.3 Photo-transistors and Other Devices	323
6.4 Piezoelectricity and Thermo-electricity in Polymer Nanofibers	324
6.4.1 Piezoelectric Properties	324
6.4.2 Thermo-electric Properties	337
References	338

Chapter 7	Biological Functional Properties and Their Applications	
7.1	Control of Cell Behavior by Nanostructures: Motivations and General Aspects	349
7.1.1	Nanostructures–cell Interactions, Advantages and Issues with Polymer Nanofibers	353
7.2	Nanofibers by Biomolecules	355
7.3	Biofunctionalization of Polymer Nanofibers	359
7.4	Drug Delivery	362
7.4.1	Cancer Treatment	365
7.4.2	Anti-bacterial Molecules and Other Applications	366
7.5	Wound Dressing	366
7.6	Other Biomedical Devices	368
7.7	Tissue Engineering: Nanofibers Scaffolds and Their Applications	369
7.7.1	Interplay between Structural Properties and Biological Functionality of Nanofibers	372
7.7.2	Neuronal Tissue Engineering	373
7.7.3	Cartilage and Bone	378
7.7.4	Dermal Tissues	383
7.7.5	Applications to Other Tissues and Hybrid Architectures	385
7.7.6	Effects on Differentiation of Stem Cells	390
	References	397
	List of Acronyms	410
	List of Symbols	413
	Subject Index	418
